**DETAILED ACTION** 

This office action follows a preliminary amendment filed on June 12, 2000. Claims 6-8

and 12 were amended to remove multiple dependency.

Claim Objections

1. Claim 5 is objected to under 37 CFR 1.75(c), as being of improper dependent form for

failing to further limit the subject matter of a previous claim. Applicant is required to cancel the

claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the

claim(s) in independent form. The species vinyl norbornane does not satisfy the description of

the vinyl compound of claim 4, and therefore, recitation of this material fails to limit further the

subject matter of claim 4.

2. Claim 6 is objected to because of the following informalities: The claim recites the

phrase "propylene polymer copolymer." The term copolymer is an apparent typographical error.

Appropriate correction is required.

3. Claims 8, 9, and 11 are objected to because of the following informalities: The preamble

to all recited Markush groups should read "from the group consisting of." See MPEP

2173.05(h). Appropriate corrections are required.

Art Unit: 1713

## Claim Rejections - 35 USC § 112

- 4. The following is a quotation of the second paragraph of 35 U.S.C. 112:
  - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 5. Claim 5 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The phrase "in particular" renders the claim indefinite because it is unclear whether the limitation(s) following the phrase are part of the claimed invention. See MPEP § 2173.05(d).
- 6. Claim 7 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The claim recites the limitation "nucleated propylene polymer." There is insufficient antecedent basis for this limitation in the claim.
- Claim 8 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The claim recites the colors "yellow/orange," "red/violet," and "blue/green." The meaning of the term "yellow/orange" as written is vague because it is not clear whether the claim is drawn to a yellow pigment and an orange pigment, or a single yellow-orange pigment. The relative degree of coloration is also vague for the term does not differentiate between a yellow-orange pigment and an orange-yellow pigment. Both aforementioned pigments technically would contain the requisite colors. A similar argument may be applied to the other terms.

Application/Control Number: 09/530,803

Art Unit: 1713

8. Claim 11 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for

Page 4

failing to particularly point out and distinctly claim the subject matter which applicant regards as

the invention. The claim recites the limitation "nucleated polypropylene composition." There is

insufficient antecedent basis for this limitation in the claim.

9. Claims 12 and 13 provide for the use of a polymer composition, but, since the claim does

not set forth any steps involved in the method/process, it is unclear what method/process

applicant is intending to encompass. A claim is indefinite where it merely recites a use without

any active, positive steps delimiting how this use is actually practiced.

Claims 12 and 13 are rejected under 35 U.S.C. 101 because the claimed recitation of a

use, without setting forth any steps involved in the process, results in an improper definition of a

process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for

example Ex parte Dunki, 153 USPQ 678 (Bd.App. 1967) and Clinical Products, Ltd. v. Brenner,

255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

Art Unit: 1713

## Claim Rejections - 35 USC § 103

10. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 11. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
  - 1. Determining the scope and contents of the prior art.
  - 2. Ascertaining the differences between the prior art and the claims at issue.
  - 3. Resolving the level of ordinary skill in the pertinent art.
  - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 12. Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,684,099 to Watanabe *et al*.

The prior art of Watanabe *et al.* relates to compositions comprising polypropylene polymer. The reference teaches the incorporation of nucleating agents to impart rigidity, heat resistance, and impact strength to the polymer (col. 9, lines 37-39). Preferred examples of nucleating agent include polyvinylcyclohexane and polyvinylcyclopentane (col. 9, lines 50-51) used in amounts of 0.05-0.5 % by weight (col. 9, line 55). According to the inventors, additives ordinarily employed in the field of art, such as a coloring agent, can be added to the composition (col. 10, line 41) in an amount of 0.01-1 % by weight (col. 10, line 63). Examples of coloring

Application/Control Number: 09/530,803

Art Unit: 1713

agent include carbon black, phthalocyanine, quinacridone, indolin, azo pigments, and titanium dioxide (col. 10, lines 54-56). Although no single embodiment that encompasses all the claims is shown in the examples of the reference, it would have been obvious to one having ordinary skill in the art to arrive at the claims of the present invention because such an embodiment is adequately provided in the generic disclosure of Watanabe *et al*.

The reference is silent with respect to the particular physicochemical properties recited in present claims 1, 3, 10, and 11. However, a reasonable basis exists to believe that the prior art compositions would exhibit the same properties, especially in view of the fact that the prior art recites essentially the same composition. Since the PTO can not perform experiments, the burden is shifted to the Applicants to establish an unobviousness difference. *In re Best*, 562 F.2d 1252, 1255, 195 USPQ 430, 433 (CCPA 1977). *In re Spada*, 911 F.2d 705, 709, 15 USPQ2d 1655, 1658 (Fed. Cir. 1990).

Watanabe *et al.* indicates that the compositions are injection molded or they are extruded using a pipe molding apparatus (col. 10, lines 22-25). Thus, it would have been obvious to one having ordinary skill in the art to do the same, since these techniques are taught in the reference.

Finally, regarding claim 13, intended use must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. See MPEP § 2111.02. There is no indication that the composition of the prior art can not be made into the claimed articles of manufacture. As such, the composition still meets the claims.

Art Unit: 1713

13. Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 4,551,501 to Shiga et al. in view of 5,684,099 to Watanabe et al.

Shiga et al. discloses a polymer composition comprising a blend of crystalline polypropylene and 0.05-10,000 ppm by weight of a vinyl cycloalkane (claim 1). The inventors contemplate the use of additives normally incorporated into polypropylene, such as carbon black and pigments (col. 3, line 50). A specific amount of pigment is not disclosed in any example.

The prior art of Watanabe *et al.* also relates to compositions comprising polypropylene polymer nucleated with polyvinyl cycloalkanes. According to the inventors, additives ordinarily employed in the field of art, such as a coloring agent, can be added to the composition (col. 10, line 41) in an amount of 0.01-1 % by weight (col. 10, line 63). With respect to claims 1, 10 and 11, it would have been obvious to one having ordinary skill in the art to use the same amount of coloring agent in the composition of Shiga *et al.*, in order to produce a colored polypropylene composition.

Regarding claims 4, 5, 8, and 9, Shiga et al. teach the use of vinyl cycloalkanes selected from vinyl cyclopentane, vinyl cyclohexane, vinyl 2-methyl cyclohexane, and vinyl norbornane (claim 8), and Watanabe et al. disclose use of carbon black, phthalocyanine, quinacridone, indolin, azo pigments, and titanium dioxide as coloring agents (col. 10, lines 54-56). Thus, it would have been obvious to use these compounds because they are disclosed adequately in the prior art. In the example of Shiga et al., the vinyl cyclohexane is polymerized first, followed by polymerization of propylene in the presence of vinyl cyclohexane polymer. Note that the prior art process is basically the same as that recited in present claim 6, resulting in the polymer blend

described in present claim 7. Watanabe et al. indicates that the compositions are injection molded or they are extruded using a pipe molding apparatus (col. 10, lines 22-25). Thus, it would have been obvious to one having ordinary skill in the art follow the same procedures, since these techniques are taught in the references.

The prior art is silent with respect to the particular physicochemical properties recited in the remaining claims. However, a reasonable basis exists to believe that the prior art compositions would exhibit the same properties, especially in view of the fact that the prior art recites essentially the same composition. Since the PTO can not perform experiments, the burden is shifted to the Applicants to establish an unobviousness difference. *In re Best*, 562 F.2d 1252, 1255, 195 USPQ 430, 433 (CCPA 1977). *In re Spada*, 911 F.2d 705, 709, 15 USPQ2d 1655, 1658 (Fed. Cir. 1990).

Finally, regarding claim 13, intended use must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. See MPEP § 2111.02. There is no indication that the composition of the prior art can not be made into the claimed articles of manufacture. As such, the composition still meets the claims.
